

Orange 2.4GHz Receiver

The receiver matches the Spektrum DX5e and provides a replacement or a second receiver for an extra boat.

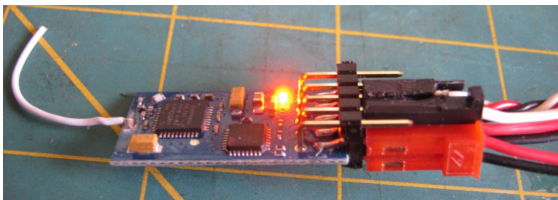

The power connector (red plug here) attaches to the first set of pins on pins 1 and 2. Pin 3 is used by the bind plug.

For a Seawind the sail servo attaches to the second connector and the rudder servo to the third. The fourth and fifth set of pins are unused.

All earth wires, which are usually black, must be connected to the pin 1 which is the back side of the board.

When binding to the transmitter the power plug is put on another set of pins and the bind plug on the first set.

Binding is done as stated in the Spektrum manual.
